Start RCE, go to "Extras" and there you should see the files. Right click on "Executables" and mark for installation. Right click to open the "Customize context menu" window. Browse to this location for the files listed below, and proceed. Go back to the Extras window and just select on of the files listed. This will install them. I just did this for french. In the Extras window change "Run [Include Trial]" to "No". Close that window. This will stop it from asking for a serial number after you close the program. You do not need to install the fonts anymore if you do not want them. Then one does a "Control Panel". Right click anywhere on the "Programs" area. you will see a menu that includes: 1. "Open with" 2. "Run" 3. "Registry Editor" 4. "Search for installed programs" 5. "Other" 6. "Policies" 7. "Close" You can use the little arrows to move a item. "Other" is used for unneeded things, so you have to add more windows to it. Most important: "Run" and "Run" are there as well. Why? Because if there was "Run" there it would open the "Run" dialog. Now go to "Control Panel", "System Tools", "Folder Options" Go to "Show hidden files and folders", then "Folder options".
